

ABSTRACT OF THE DISCLOSURE

A keeping case and a partition plate for the same with which separating position can be freely changed without forming grooves on a case main body. A partition plate to divide an inner space of an upper-opening case main body as to freely slide along parallel sides of an upper-opening brim of the case main body. The partition plate has a hitching portion, detachably hitched on the sides of the case main body, to prevent the plate from being drawn out of the case.
